

## **BAB V**

### **SIMPULAN DAN SARAN**

#### **5.1 SIMPULAN**

- Isopropanol, *chloroxylenol* dan *triclosan* memiliki aktivitas antimikroba terhadap *Staphylococcus aureus* secara *in vitro*.
- Potensi isopropanol tidak lebih besar dibandingkan dengan *chloroxylenol* dan *triclosan* terhadap *Staphylococcus aureus* secara *in vitro*.

#### **5.2 SARAN**

- Perlu dilakukan penelitian lebih lanjut tentang aktivitas antimikroba isopropanol, *chloroxylenol* dan *triclosan* terhadap *Staphylococcus aureus* secara *in vivo*.
- Perlu dilakukan penelitian lebih lanjut tentang aktivitas antimikroba isopropanol, *chloroxylenol* dan *triclosan* terhadap bakteri kontaminan tangan lainnya secara *in vivo* dan *in vitro*.
- Perlu dilakukan penelitian lebih lanjut tentang efek antimikroba isopropanol, *chloroxylenol* dan *triclosan* dengan konsetrasi yang lebih kecil untuk mengetahui konsentrasi minimal yang dapat memiliki aktivitas antimikroba terhadap *Staphylococcus aureus* dan bakteri kontaminan tangan lainnya.
