ABSTRAK

Kata Kunci : website, sistem produksi, penjualan, pembelian
ABSTRACT

The development of web-based platform information system has the purpose of reducing misrecorded data, caused by human-error. The development process includes analysis process, database design, user interface design, documentation, and application development. Few modules are also included such as master data module, purchasing module, sales module, reporting module, as well as SPK module, to produce the finished goods from the plain greige. Furthermore, detailed functionalities of each modules will be discussed in this job training report. As an addition, some few tools are also used in this production system development, such as Macromedia Dreamweaver as PHP editor, and MySQL as database management system.

Keywords: website, production system, purchasing, sales
