

ABSTRACT

Information System is the System which can help the user to manage all of the information. This application is a web-based application which use the PHP programming language with Macromedia Dreamweaver as a compiler. To make a dynamic web-application, this application combine PHP programming language with MySQL Database. So all of application data is store in MySQL format. This application is built to handle booking process, ordering process, payment process by a customer. Beside that, this application will help a casheer to handle the transactions, a kitchen to handle the order, and an administrator or an owner to get some report. In this application, there is a member who can do a booking process from outside using every browser which supports XHTML. This application is a helpful application which can make every process going faster and easier.
