

ABSTRAK

Informasi adalah suatu hal yang sangat penting pada sebuah proses pengembangan industri pada bidang - bidang tertentu. Oleh karena itu, pengolahan informasi yang cepat, akurat dan memudahkan pengguna informasi tentunya akan sangat bermanfaat dalam berkembangnya industri tersebut. Pada bidang industri jasa transportasi khususnya agen perjalanan yang akhir – akhir ini mulai berkembang, pengolahan informasi juga sangat berperan penting untuk kelangsungan operasional agen perjalanan tersebut.

Suatu aplikasi yang bisa mengolah informasi dan data yang muncul di dalam setiap transaksi yang terjadi di dalam industri agen perjalanan ini sangat dibutuhkan agar proses pengolahan data bisa lebih cepat dan akurat. Data yang di dalamnya termasuk data transaksi pemesanan tempat duduk, data penyewaan mobil dan data komponen – komponen pendukung operasional lainnya seperti karyawan yang bekerja dan mobil yang digunakan perlu diolah dan disimpan dengan baik.

Oleh karena itu aplikasi ini dibangun untuk mempermudah perusahaan yang bergerak dalam bidang industri agen perjalanan dalam memonitor transaksi pemesanan tempat duduk, rental mobil dan juga komponen pendukung operasional lainnya. Dibuat dengan judul “Sistem Informasi Agen Perjalanan Dengan Menggunakan Java 2 SE dan PostgreSQL” aplikasi ini diharapkan bisa membantu penggunaanya dalam mengolah data tersebut.

ABSTRACT

Information is a very important aspect in the development process of certain industries. Therefore a fast and accurate information processing is advantageous in the development of those industries, yet the information processing has to be easy for the information users. In the industry of travel agent that recently growing up rapidly, information processing also plays an important role to maintain the operational and development of the travel agent industry.

An application which able to process information or data that emerge in every transaction that happens in this travel agent industry is necessarily needed so the process will be faster and more accurate. The data which include seat booking, car rental and other operational support such as employees who work for the company and cars that used has to be processes and stored in proper way.

Therefore, this application is built to ease the company that runs travel agent industry in monitors every seat booking transaction, car rental transactions that come from the customers and other components that support company operational. Build with the title "Travel Agent Information System Using Java 2 SE and PostgreSQL" this application expected to help its user in processing those data.
