

## **ABSTRAK**

*Penelitian ini bertujuan untuk mengetahui kontribusi determinan-determinan terhadap intention untuk melakukan saat teduh pada AKK (Anggota Kelompok Kecil) PMK (Persekutuan Mahasiswa Kristen) di Universitas Kristen Maranatha Bandung. Jumlah sampel dalam penelitian ini adalah 128 orang dan sampel dipilih dengan menggunakan metode purposive sampling.*

*Alat ukur yang digunakan dalam kuesioner mengacu pada Teori Planned Behavior yang disusun oleh Icek Ajzen (2005), yang diadaptasi serta dimodifikasi oleh peneliti. Pada penelitian ini uji validitas menggunakan Pearson dan uji reliabilitas menggunakan rumus koefisien reliabilitas Alpha Cronbach. Data hasil penelitian diolah dengan menggunakan teknik analisis regresi dan korelasi Pearson. Secara bersama-sama ketiga determinan berkontribusi terhadap intention untuk melakukan saat teduh terhadap AKK PMK. Determinan yang memberikan kontribusi paling besar adalah Attitude toward the behavior kemudian diikuti oleh perceived behavioral control dan subjective norms yang memberikan kontribusi terkecil. Determinan yang memiliki korelasi paling besar adalah antara attitude toward the behavior dengan subjective norms, lalu diikuti oleh attitude toward the behavior dengan perceived behavioral control dan korelasi terkecil antara perceived behavioral control dengan subjective norms.*

*Berdasarkan penelitian ini, peneliti menyarankan kepada pihak pendamping dan pengurus PMK untuk tetap mengadakan pembinaan-pembinaan rohani terutama tentang saat teduh. Lalu kepada setiap PKK (Pemimpin Kelompok Kecil) untuk memberikan motivasi intrinsik kepada AKKnya. Selain itu PKK diharapkan memberikan feedback kepada AKK dan Kelompok Kecil melakukan diskusi mengenai hal tersebut. Selain itu, PKK dan orang tua juga diharapkan memberikan pujian jika AKK melakukan saat teduh, dan teguran jika mereka tidak melakukan saat teduh. Peneliti menyarankan agar dilakukan penelitian serupa dengan lebih melibatkan belief-belief secara lebih spesifik dan mendalam terhadap hubungannya dengan perilaku saat teduh. Peneliti juga menyarankan untuk dilakukan penelitian terhadap kegiatan lainnya yang ada di KK dan PMK.*

## ABSTRACT

*This research would like to reveal the contribution of determiners on the intention in doing daily devotions by AKK (The member of The Small Group/Anggota Kelompok Kecil) of PMK (Community of Christian Students/Persekutuan Kristen Maranatha) at Maranatha Chirstian University Bandung. The number of samples in this research was 128 people and samples were selected based on purposive sampling method.*

*The measurement tool which is used is questionnaire due to Planned Behavior Theory complied by Icek Ajzen (2005) that was adapted and also modified by the researcher. In these research validation test's results by using Pearson and reliability test with the coefficient Alpha Cronchbach's formula. The datum of research were processed by using the analysis of regression techniques and Pearson correlation. At the same time, the there of determiners influenced the intention to do daily devotions by AKK PMK. Attitude toward the behavior gave the biggest contribution, and then followed by perceived behavioral control and subjective norms gave the most little contribution. The determiners which has the biggest correlation were range between attitude toward the behavior with subjective norms, followed by attitude toward the behavior and perceived behavioral control and the most little correlation between perceived behavioral control and subjective.*

*Based on these research, the researcher proposed suggestion to the assistan and the committee of PMK to keep doing the spiritual founding, especially which themed about daily devotions. And to any small group leader (PKK) to provide intrinsic motivation to each their AKK. PKK also expected to give feedback to their AKK and then the Small Group make a discussion about the things that they don't understand. PKK and parents were also expected to give reward if AKK doing daily devotions and punishment to AKK if they don't. Researcher also suggest to held a same research that involved beliefs specifically and deeply toward the relationship with daily devotions behavior. Researcher also suggest to do research toward the the other activity that held in Small Group and PMK.*
