

CHAPTER IV

CONCLUSION

In this chapter I would like to explain about the best solutions for the problem that I found when I did my internship at Kalam Kudus Kindergarten Bandung. The problem that I had is difficulty in teaching an autistic child in Kindergarten A class. I find two causes of the problem. First, the child was easily disturbed by many things around her. The next cause is I, as a teacher, am not ready to teach this autistic child. The problem also has two effects, which are I was tired enough to face this child in class and the child became angry when the class was too noisy. To solve this problem, I have three potential solutions. The first potential solution is I will teach using the visual aids. The second potential solution is I will try to build a relationship with the autistic child's parents. Then the third potential solution is I will give a reward for this child.

The best solution to teach this autistic child is the combination of the three potential solutions. I will try to build a relationship with the

autistic child's parents first then when I know her better, I can decide the best visual aids that I will use in the classroom, and finally the reward system will help her to learn and achieve more in learning. I choose to combine all of my potential solutions because I think every potential solution have strengths and weaknesses.

Last but not least, I hope the other teachers in the regular school can use the potential solutions to teach the autistic child in their classroom. Besides, for the autistic student, I hope the child can feel better when the teacher apply these potential solutions. Finally, for the school, I hope through this Term Paper Kalam Kudus Kindergarten will know how to handle autistic children in the best way.
