

ABSTRAK

Teknologi web dan jumlah pengguna internet berkembang dengan sangat pesat. Perkembangan media *online* mendorong munculnya informasi tekstual yang tidak terbatas. Twitter merupakan salah satu media *online* yang memungkinkan pengguna untuk mengirimkan pesan. Pesan yang ada pada Twitter dapat digunakan untuk menganalisis sentimen konsumen terhadap suatu produk. Salah satu cara untuk melakukan analisis sentimen yaitu *Naïve Bayes Classifier (NBC)*. NBC adalah salah satu teknik klasifikasi yang digunakan untuk mengklasifikasi kalimat menjadi positif, negatif, ataupun netral. Untuk membuat sebuah aplikasi analisis sentimen diperlukan *data training* dan *data testing*. Data yang digunakan yaitu *tweets* yang berhubungan dengan beberapa *provider* telekomunikasi di Indonesia. Tahap-tahap pembuatan *data training* dimulai dari pengambilan data pada Twitter, *pre processing*, *manual judgment*, dan yang terakhir *selection*. *Data training* yang digunakan ada 1457 *tweet* yang diambil antara 15 Mei 2015 sampai tanggal 22 Mei 2015. Ada beberapa *data testing* yang digunakan salah satunya yaitu dengan menggunakan *data training* itu sendiri. *Analisis* sentimen pada aplikasi memiliki tingkat keakuratan sekitar 70%. Persentase *tweets* pada beberapa *provider* telekomunikasi cenderung lebih banyak *tweets* negatif dan netral daripada positif.

Kata Kunci: Twitter, analisis sentimen, *pre-processing*, *Naïve Bayes*.

ABSTRACT

Web technology and the number of Internet users growing very rapidly. The development of online media to encourage the emergence of textual information which is not limited. Twitter is one of the online media that allows users to send messages. Existing messages on Twitter can be used to analyze consumer sentiment to a product. One way to perform sentiment analysis that Naïve Bayes Classifier (NBC). NBC is one of the classification techniques are used to classify the sentence be positive, negative, or neutral. To create an application sentiment analysis required training data and data testing. The data used are tweets related to multiple telecommunications providers in Indonesia. The stages of manufacture of the training data starting from the collection of data on Twitter, pre-processing, manual judgment, and the final selection. Training data are used there in 1457 tweets were taken between May 15, 2015 until May 22, 2015. There are some data testing that used one of them is by using the training data itself. Sentiment analysis on the application have the accuracy level of about 70%. The percentage of tweets in some telecom providers tend to be more negative tweets and neutral rather than positive.

Keywords : Twitter , sentiment analysis , pre - processing , Naïve Bayes .
