

## ABSTRAK

Pendataan data pegawai merupakan salah satu sistem dalam administrasi sekolah. Pendataan data pegawai secara manual adalah dengan cara mengisi lembaran yang disediakan oleh staff sekolah pada saat diterima sebagai pegawai. Kelemahan dalam sistem pendataan secara manual sekolah adalah harus melakukan pemeriksaan pada dokumen-dokumen yang terkait dalam data pegawai (misalnya data jabatan, data mutasi, data golongan, data sanksi, data keluarga, data cuti, data pendidikan, dan data pelatihan). Tujuan dari penelitian ini adalah membuat aplikasi website menggunakan sistem komputerisasi yang memadai agar dapat memaksimalkan kinerja para staf, sehingga kegiatan yang dilakukan dan penyajian informasinya pun dapat lebih cepat tepat dan akurat. Perancangan Aplikasi Website data pegawai ini menggunakan Hypertext markup language yang biasa disebut HTML, Hypertext Preprocessor yang biasa disebut PHP, dan Javascript. Aplikasi Website data pegawai dibuat berdasarkan pemodelan Flowchart, dan ERD (entity relation diagram). Penyimpanan data menggunakan database mysql. Penggunaan Aplikasi Website dapat mengelola data pegawai.

Kata kunci : Aplikasi Website, Data Pegawai, PHP, Javascript, Flowchart, ERD (entity relation diagram).

## ABSTRACT

Documenting employee data is one system in the school administration. Documenting employee data manually is by filling out a sheet provided by the school staff when received as pegawai. Kelemahan manually in the data collection system of the school is to conduct the inspection on the documents relating to employee data (such as your office, the data transfer, the data class, sanctions the data, family data, the data on leave, educational data and training data). The purpose of this research is to create a web application using a computerized system that is adequate in order to maximize the performance of the staff, so that the activities conducted and presentation of the information can be more quickly right and akurat. Perancangan Website Application employee data using Hypertext markup language commonly called HTML, Hypertext Preprocessor commonly called PHP, and Javascript. Website Application employee data created by modeling Flowchart, and ERD (entity relation diagram). Penyimpanan data using database mysql. Penggunaan Website application can manage employee data.

Keywords: Application Website, Employee Data, PHP, Javascript, Flowchart, ERD (entity relation diagram).
