

CHAPTER IV

CONCLUSION

The problem that I faced is my difficulty in teaching Mathematics to Grade One and Grade Two at Equal Bright School. In this term paper, I have analysed the causes and effects of my problem. The causes of my problem are I could not prepare the material well, I did not know about the right teaching methods and I did not have teaching experience in teaching Mathematics. The effects of my problem are the pupils became bored, the pupils did not understand the lesson and the pupils refused to do the exercises that I gave them. Besides the causes and effects of my problem, I have found some potential solutions that can be used to solve the problem. There are three potential solutions to solve the problem. The first potential solution of the problem is I will use games to make the pupils understand what I teach more easily. The second potential solution of the problem is I will find pupils' interest in teaching Mathematics. The third potential solution is I will use some stories to teach Mathematics to the pupils.

The best potential solution to solve my problem is I will use the combination of the three potential solutions that I have already discussed in the third chapter.

First I will use the first potential solution which is I will use games. After that, I will use the second potential solution which is I will find the pupils' interests in teaching Mathematics. To make the pupils become more interested in my lesson, I will tell some stories which suit the pupils' interest.

Before the teacher applies the three potential solutions that I have already discussed, it is better for them to know about the pupils characteristics. If we already know about the their characteristics, the three potential solutions can be used more effectively.
