

## ABSTRAK

Perkembangan teknologi saat ini berkembang dengan sangat pesat, inovasi yang tidak ada habisnya membuat hampir setiap aspek kehidupan menjadi lebih mudah. Contohnya tangga, inovasi dan teknologi membuat manusia untuk tidak perlu repot dan mengeluarkan tenaga untuk melewatiannya seperti eskalator

Tapi segala kemudahan tersebut tidak selaras dengan aspek kesehatan, karena tentu saja tubuh manusia dirancang untuk terus bergerak dan membakar energi yang ada. Pada Tugas Akhir ini, penulis akan membuat sebuah prototipe tangga yang di design agar partisipan dapat tetap melakukan aktifitas fisik dan tetap mendapatkan pengalaman yang menyenangkan ketika menaikinya. Program yang ditulis sedemikian rupa hingga setiap anak tangga yang diinjak akan menghasilkan respon musical menyerupai nada piano.

Pada prototipe ini terdapat beberapa komponen yang penting seperti sensor ultrasonik, sensor cahaya, *integrated LED*, modul suara, *speaker* dan mikrokontroler.

Kata kunci : Mikrokontroler, Sensor Ultrasonik, Sensor Cahaya, *LED*, Tangga Interaktif

## **ABSTRACT**

*Today, technology is growing very rapid, endless innovation makes every aspect of life easier. Stairs, for example. Technology and innovation offers us not to bother spending some energies to pass through it, like escalator.*

*But, all those ease not even aligned with health aspect, because of course human body designed to keep moving and burn the existing energy. In this final project, writer builds a prototype of stairs designed so that participants can keep engaging physical activity while still having fun experience when moving through it. The software was written in such a way that each step a participant took on the stairs provided a musical response like piano's tunes..*

*This prototype consisted of several important components, such as ultrasonic sensor, light sensor, integrated LED strips, sound module, speakers and microcontroller.*

*Keywords : Microcontroller, Ultrasonic Sensor, Light Sensor, LED, Interactive Stairs*
