

ABSTRACT

DESCRIPTION OF DISTRIBUTION INPATIENT TONSILLECTOMY AT IMMANUEL HOSPITAL BANDUNG PERIOD YEAR 2009

Rikha , 2010 Tutor I : dr. Freddy Tumewu A, MS
 Tutor II : dr. Evi Yuniawati, MKM

Tonsils are part of the body's defense system that will grow as a defense reactions when there is infection. Tonsillitis treatment is with antibiotics or with tonsillectomy. Tonsillectomy is defined as surgical removal of the palatine tonsils and has long been known that around 2000 years ago. It was first introduced by Cornelius Celcus, a Roman writer and researcher.

The aim of this study is to determine the prevalence of inpatient tonsillectomy on distribution characteristics, based on age, type of operation, symptoms, length of hospitalization, acute or chronic, complication and the treatment, and the use of post tonsillectomy antibiotic at Immanuel Hospital Bandung , for period year 2009.

The research method is a observational descriptive with retrospective design of the medical record of inpatients with tonsillectomy at Immanuel Hospital Bandung, for period year 2009.

The results showed that in period year 2009, there were 41 cases of inpatients tonsillectomy at Immanuel Hospital Bandung which overall patient were diagnosed as chronic tonsillitis.

The conclusion obtained that 85,4% of odinophagia as the most common symptom, 39,1% of penicillin as the most common used antibiotic post tonsillectomy, 63.4% are adult patients and 9,8% patients with bleeding complication.

Keywords: tonsillectomy, post tonsillectomy antibiotic
