

## **ABSTRACT**

*Research conducted by the researcher discussed about Self Regulation trial training in Forethought phase toward the future Relationship Officer in "X" private Bank in Bandung. This research is conducted to fullfill the Post Graduate Master of Psychological Examination in Maranatha Christian University.*

*The background of the research is a phenomenon happened recently in the "X" private Bank in Bandung, especially on the new Relationship Officer which have difficulties to make a plan in the beginning of their work and have a lack of confidence to do their jobs. Most of the new Relationship Officer feel inconfident to do a selling process, unable to anticipate the final result, and showed a lack of interest in selling product independently so that sometimes they do not have any courage to face the challenge or obstacle happens on the field. These were the symptom happened in Self Regulation Relationship Officer, especially in the forethought phase. Start from the exist phenomenon, an effort is being needed to enhance self regulation in the forethought phase through the Self Regulation in the forethought phase training. Through this research, we want to find out if there is any enhancement on the self regulation in forethought phase before and after Self Regulation forethought phase training toward the future Relationship Officer in an "X" private Bank in Bandung.*

*Through this research, the researcher wish the result can give a theoretic usage to give a deeper understanding and enriched the knowledge of Industrial Psychology especially about Self Regulation Theory in the Forethought phase on Relationship Officer, to understand the theory and learning process deeper to prepare Self Regulation training moduls especially Forethought phase and as a consideration for other research which has similar topic. The practical usage include the usage for the future Relationship Officer is expected to be able to enhance knowledge, behaviour and skill in terms of self forethought. For the "X" private Bank is to help to understand the importance of the Self Regulation in the forethought phase which can be made as one agenda in order to enhance Self Regulation in the forethought phase for the future Relationship Officer.*

*The theory being used is Self Regulation Theory by Zimmerman, 2000, Experiential Learning (Kurt Levin) and Effective Training by Silberman (1990). The Self Regulation theory is specialized on the Forethought phase which consist of Goal Setting, Strategic Planning, Self Efficacy, Outcome Expectation, Intrinsic Interest / value and Goal Orientation. The research design being used is the experimental quation, to see the effect (as independent variable) which is the Self Regulation in the forethought phase toward the dependent variable which is the future "X" private Bank Relationship Officer in Bandung.*

*The modul design of the Self Regulation in the forethought phase training consist of 8 moduls. The measurements tools being used to measure Self Regulation phase Forethought is in form of questionnaire. The validity measurement of the instrument is done by using Spearmen rank test with the validity item result is between 0.461 – 0.927 and for the reliability instrument is using Alpha Cronbach with 0.965. The analysis using Wilcoxon different test is to find the difference between Self Regulation phase Forethought before and after the training. Based on the hypothesis result,  $Z = -3.157$  and the Z table = 0,0021, shows that  $H_0$  is rejected and  $H_1$  is accepted, using 5% significance level, it means that there is a significant enhancement toward the self regulation phase Forethought ability before and after the training. The suggestion being offered is that the result of this*

*research can be used to examine the effectivity of training modul and also to investigate a training in other area.*

## **ABSTRAK**

*Penelitian yang dilakukan oleh peneliti adalah mengenai uji coba pelatihan Self Regulation phase Forethought pada calon Relationship Officer Bank Swasta "X" di Bandung. Penelitian ini disusun untuk memenuhi ujian Pascasarjana Magister Psikologi Universitas Kristen Maranatha.*

*Penelitian dilatarbelakangi oleh fenomena yang terjadi di Bank Swasta "X" di Bandung pada Relationship Officer baru yang mengalami kesulitan melakukan perencanaan diawal kerjanya dan kurang yakin dapat melaksanakan apa yang menjadi pekerjaannya. Sebagian besar Relationship Officer baru, merasa kurang percaya diri untuk melakukan proses penjualan, kurang mampu mengantisipasi hasil yang akan dicapai dan minat untuk melakukan penjualan kurang ditampilkan. Hal yang tergambar ini merupakan gejala Self Regulation Relationship Officer, terutama pada tahap perencanaan (forethought). Berangkat dari fenomena ini, maka diperlukan upaya untuk meningkatkan Self Regulation phase Forethought melalui pelatihan Self Regulation phase Forethought. Penelitian ini melihat apakah terdapat peningkatan pada kemampuan Self Regulation phase forethought sebelum dan sesudah pelatihan Self Regulation phase Forethought terhadap calon Relationship Officer Bank Swasta "X" di Bandung. Kegunaan teoretiknya adalah memperdalam pemahaman dan memperkaya pengetahuan Psikologi Industri, terutama tentang teori Self Regulation phase Forethought pada Relationship Officer, memperdalam teori dan prinsip belajar penyusunan modul pelatihan Self Regulation phase Forethought dan sebagai bahan pertimbangan untuk penelitian selanjutnya. Kegunaan praktis bagi calon Relationship Officer, agar dapat meningkatkan pengetahuan, sikap dan keterampilan mengenai Self Regulation phase Forethought. Bagi Bank Swasta "X" untuk membantu memahami pentingnya pelatihan Self Regulation phase Forethought yang dapat dijadikan salah satu agenda pelatihan bagi calon Relationship Officer.*

*Teori yang digunakan adalah Teori Self Regulation dari Zimmerman, 2000, Experiential Learning (Kurt Lewin) dan Pelatihan Efektif dari Silberman (1990) dan Evaluating Training (Kirkpatrick). Teori Self Regulation dikhususkan pada phase Forethought yang terdiri dari Goal Setting, Strategic Planning, Self Efficacy, Outcome Expectation, Intrinsic Interest/value dan Goal Orientation. Rancangan penelitian yang digunakan adalah quasi experimental, melihat pengaruh independent variabel yaitu pelatihan Self Regulation phase Forethought terhadap dependent variabel yaitu Self Regulation phase Forethought calon Relationship Officer Bank Swasta "X" di Bandung. Rancangan modul pelatihan Self Regulation phase Forethought terdiri dari 8 modul materi. Alat ukur yang digunakan untuk mengukur Self regulation phase Forethought berbentuk kuesioner. Pengukuran validitas alat ukur dilakukan dengan uji rank Spearman dengan hasil uji validitas item kisaran 0.461-0.927 dan uji realibilitas menggunakan Alpha Cronbach dengan hasil 0.965. Teknik analisis menggunakan uji beda Wilcoxon untuk mengetahui perbedaan Self Regulation phase Forethought sebelum dan sesudah pelatihan. Berdasarkan hasil uji hipotesa diperoleh  $Z = -3.157$  dan  $Z tabel = 0.0021$  sehingga  $H_0$  ditolak dan  $H_1$  diterima. Artinya terdapat peningkatan yang signifikan pada kemampuan Self Regulation phase Forethought dari sebelum mengikuti pelatihan dengan sesudah mengikuti pelatihan pada taraf kepercayaan 95%. Kesimpulan yang diperoleh adalah modul pelatihan Self Regulation phase Forethought teruji untuk digunakan dalam meningkatkan*

*kemampuan Self Regulation phase Forethoug dan terdapat peningkatan yang signifikan pada hasil peserta setelah mengikuti pelatihan. Saran yang diajukan adalah hasil penelitian ini dapat digunakan untuk menguji efektifitas dari modul pelatihan melakukan perbaikan modul dan mengujicoba pada industri lain selain perbankan.*
