

## CHAPTER IV

### CONCLUSION

The students of Sprinters Level at Kids 2 Success have difficulty in concentrating on lessons because of three causes. The three causes are: the students are tired after having too many activities at school, the students do not like the English lesson, and the teachers do not prepare an adequate room for studying. In addition, there are three effects of the problem, which are: the students cannot study well, the students do their task in Kids 2 Success' slowly, and the students will give low performance in their study.

In this chapter I would like to explain the best solution from the three potential solutions discussed in the previous chapter. The best potential solutions for the students with difficulty in concentrating on lessons at Kids 2 Success is using studying-while-playing method and giving the students time for taking a break.

The studying-while-playing method and giving the students time for taking a break can make the students have a better concentration because the students can enjoy learning and like the subject, which they previously do not like. If they keep studying or playing without taking a

break even if they study while they play, gradually they will feel tired and bored; consequently they are unable to concentrate. Therefore, by giving students time for taking a break, they can relax their mind; as a result, the students will be ready for the next activity, to continue studying, and of course they will be able to concentrate again. The other solution, which is the teacher teaches in interesting ways by using visual elements or picture is not suitable for handling the problem. It can make students enthusiastic or interested to study, but if the students study continually without taking a break, it can influence their ability to concentrate. They will feel tired or bored. Although the teacher teaching using visual elements or pictures, but if the study method that the teacher uses is boring, the students will not be interested in studying. Moreover, if the students still do not like the subject, it can disturb the ability to concentrate.

Difficulty in concentrating on lessons can be a disturbing problem to a new teacher who does not really know how to handle the problem. However, there are some solutions to solve the problem, as I discuss in the previous chapter. When applying the solutions, as a teacher we have to be patient because the result cannot be achieved immediately; besides, the students cannot adapt quickly with the new method, because everything needs a process.
