

## CHAPTER IV

### CONCLUSION

Late Production at PT.Bigtha is a problem. It has so many bad effects to the company such as more payment for work overtime, delayed shipment day, and bad quality of product. Avoiding this problem is not the answer. It can make the company bankrupt. In this chapter, I discuss about the chosen solution for solving the problem.

Based on my experience, the best solution is combining the three solutions which are mentioned in the previous chapter, which are training operators and supervisors continually, planning and controlling materials which are going to be used in production, and maximizing internal communication. The three solutions are important because each of these has its positive effects. The three of the solutions must be combined together to have the maximum effects, such as training operators and supervisors continually and controlling materials must be done through good internal communication to make them work. And if the company only increases planning and controlling materials without giving training to them that will not

work well too, because the supervisors and operators did not get any new knowledge from the management in company how to plan and control materials.

Giving training continually to the operators and supervisor is quite helpful for the company. It can increase knowledge and craftsmanship in their work.

Based on my observation, increasing internal communication is not too difficult. The company only needs to have meetings in which the messages delivered have to be clear. It is very crucial especially for those who cannot easily get the message.

At the end of this term paper, I hope the readers will be able to know that keeping production late is very dangerous for the company. By applying the given solutions, I hope it can help the company to prevent financial problem as soon as possible.
