

CHAPTER IV

CONCLUSIONS

After comparing the three solutions and knowing the positive and negative effects from each solution, I chose the best solution for the problem of how to make the students pay attention to the teacher at Ace Kids that I faced during my internship.

The best solutions to solve this problem are the first and second solution. In the first solution, the teacher should try to get closer with the students by sharing some stories, being a good listener to avoiding gaps between the teacher and the students, and giving more attention to the students patiently. In the second solution, the teacher should improve the teaching technique. In order to make the students feel more excited and interested in learning English in the course, the teacher can use games like scrabble or watching some movies. So, by applying these two solutions, the relationship between the teachers and the students will become better and closer. Besides that, the students will be more obedient. They will feel interested and excited to come and learn and also pay attention in the class. Moreover, since the environment in class becomes more convenient, the teaching-learning process will run fluently

and the students may get better marks

Besides the positive effects, these two solutions also have some negative effects. For example the teacher needs much patience and extra time to get closer to the students and upgrade the teaching technique. However, this solution still can be implemented in Ace Kids if the teachers can be more patient and giving extra time to the student and also Ace Kids have more budgets to improve their equipments. Nevertheless, the combination of the first and second solutions is the best solution to solve the problem in getting attention from the students.
