

## CHAPTER IV

### CONCLUSION

Based on my observation, the first cause of inattentive children in vocabulary class at KIDS2SUCCESS is lack of sleep. The second cause is the children of three to five years old have a very short attention span. The third cause is the teacher is not creative in teaching the lesson. Because the children are not attentive, they cannot understand the lesson and cannot finish their work on time. And the solutions to the problem of children being inattentive are the children should have enough sleep, the teacher must be creative in teaching the lesson, besides the teacher can give rewards to the children to make them attentive to the lesson.

From the solutions above, I choose to combine two best solutions which have minimum negative effects to solve my problem. The combination is the children should have enough sleep and the teacher should be more creative in teaching the lesson. If the children have enough sleep and the teacher is creative in teaching the lesson, the children will be attentive to the lesson.

The third solution is a good solution, but this solution has many negative effects. This solution will only make the children be more focused

on the rewards rather than on the lessons; therefore, I do not choose this solution.

In conclusion, to handle the children's inattentiveness in a vocabulary class, we must know the causes why the children are inattentive in the vocabulary class. From the causes, we can find the solutions. The best solutions to make the children attentive in the vocabulary class are the children should have enough sleep and the teacher should be more creative in teaching the vocabulary lesson.
