

## CHAPTER V

### CONCLUSION

I choose Solution B, which is having the methods and the materials that are adaptable to the kindergarteners' needs and interests, as the best solution for enhancing the kindergarteners' concentration on the lessons. One of the kindergarteners' interests is playing. By playing while learning, the kindergarteners will absorb the lesson easily. It can also increase the kindergarteners' enthusiasm to learn the lesson. When a teacher meets the students' needs and interests, the students will not feel bored and they will not act out. Thus, the learning process will be successful.

Solution B is the best solution also because in Solution B, the kindergarteners will change their bad behavior immediately and learn well after they enjoy themselves through play. Although in Solution B the kindergarteners cannot refill their energy, the kindergarteners will forget if they are actually tired from doing some activities in their schools because they enjoy playing games during the lesson. So, by utilizing Solution B, the teachers do not need to take a lot of time to give the kindergarteners any break to refill their energy.
