ABSTRAK

PENGARUH JUS BUAH MENTIMUN (*Cucumis sativus* Linn. Fructus) TERHADAP TEKANAN DARAH PRIA DEWASA

2. Diana K. Jasaputra, dr., M. Kes

Latar Belakang:

Tujuan:
Penelitian ini bertujuan untuk menilai pengaruh jus buah mentimun terhadap tekanan darah pria dewasa.

Metode:
Metode yang digunakan adalah observasi experimental, bersifat komparatif dengan disain pre-test dan post-test. Penelitian dilakukan terhadap 30 orang mahasiswa FK – UKM yang berusia antara 17 – 25 tahun, dengan cara melakukan pengukuran tekanan darah pada arteri brachialis dengan cara auskultasi pada posisi duduk dengan kedu kaki menempel di lantai, sebelum dan sesudah meminum 200 cc jus buah mentimun.

Hasil:
Hasil yang didapatkan yaitu tekanan darah sistol rata-rata sesudah minum jus buah mentimun sebesar 106,6 mmHg, lebih rendah daripada tekanan darah sistol rata-rata sebelum minum jus buah mentimun, yaitu sebesar 114,6 mmHg ($p < 0,001$). Tekenan darah diastol rata-rata sesudah minum jus buah mentimun sebesar 72,3 mmHg, lebih rendah daripada tekanan darah diastol rata-rata sebelum minum jus buah mentimun, yaitu sebesar 78,3 mmHg ($p < 0,001$).

Kesimpulan:
Jus buah mentimun menurunkan tekanan darah 30 pria dewasa dari 114,6 / 78,3 mmHg ke 106,6 / 72,3 mmHg.
ABSTRACT

THE EFFECT OF CUCUMBER JUICE (Cucumis sativus Linn. Fructus) TO BLOOD PRESSURE OF ADULT MALE

2. Diana K. Jasaputra, dr., M. Kes

Background:
Nowadays, hypertension cases are frequently found among people. Mismanagement of it will lead to dangerous complications. As people are becoming more aware of health and trying to cure disease by going back to nature, they try to seek for alternative medication instead of chemicals. Among others the use of cucumber juice is to decrease blood pressure. Cucumber is easily available, cheap and believed to be able to decrease blood pressure.

Purpose:
The purpose of this research is to evaluate the effect of cucumber juice on blood pressure of adult male.

Method:
The method used to measure the blood pressure of 30 students between 17 to 25 years of age from the Faculty of Medicine, Maranatha Christian University before and after drinking 200 ml of cucumber juice.

Result:
There are decreases from 114.6 mmHg to 106.6 mmHg of the average systolic blood pressure (p < 0.001) and 78.3 mmHg to 72.3 mmHg of the average diastolic blood pressure (p < 0.001) after consuming the cucumber juice.

Conclusion:
Cucumber juice decreases the blood pressure of 30 adult male from 114.6 / 78.3 mmHg to 106.6 / 72.3 mmHg.
