Problem: As a teacher assistant, I am not able to speak English fluently while teaching in English to pupils in K2 Bumble Bee class at Bintang Mulia.

Causes:
1. I am not confident because I am afraid of making mistakes in front of my pupils while teaching in English in the class.
2. I do not have sufficient vocabularies and grammar to teach in English.

Effects:
1. I cannot communicate what I want to say well.
2. The teacher that I assist (my partner) always helps me to clarify what I want to say.

Potential Solution 1:
A few days before I teach, I prepare what I will say during the class and practice it in front of my friends, who understand English, because they can correct me if I make errors.

Positive effects:
1. It helps me be more confident while teaching in English in front of my pupils.
2. I feel more ready while I teach in English.

Negative effects:
1. I have to keep arranging the best time to practise teaching in English in front of my friends because they have their own activities.
2. I have to use my spare time to prepare what I want to say during the class.

Potential Solution 2:
I force myself to keep teaching in English to practice my English so that I become more fluent.

Positive effects:
1. It can improve my speaking skill because I can learn from my mistakes when I get my partner’s feedback.
2. It encourages me to keep enriching my vocabularies and improving my grammar.

Negative effects:
1. My grammar is not always correct.
2. I got stuck while speaking and teaching in English because I do not have sufficient vocabularies and grammar to relay what I think.

Potential Solution 3:
I keep studying grammar and enriching myself with new vocabularies every day as a way to improve my English speaking skill.

Positive effects:
1. I can speak English using better structures.
2. It makes me know many new vocabularies to apply while teaching in English.

Negative effects:
1. It takes my rest time to study grammar and vocabularies.
2. I feel tired because I need more time to study grammar and vocabularies.

Chosen Solution:
The combination of potential solutions 1, 2, and 3.
