Flowchart

Causes:
1. The children lack of care from their parents
2. The child has ADD
3. The teachers do not enforce the rules consistently

Problem:
There are three undisciplined children of aged 5 – 7 years old in Fish Class at Bintang Kecil Kindergarten teacher

Effects:
1. The children disturb the other children and makes noises in the class.
2. The children do not have good academic achievement.
3. The children cannot focus on the lesson

Potential Negative Effects:
1. It may lead children to achieve only the specific tasks that are rewarded
2. The children will ask for the reward more and more

Potential Solution I:
The teachers care about the children by giving positive reinforcement

Potential Positive Effects:
1. It can motivate children to do the task better.
2. The children will feel loved
3. The children will respond more quickly to do the task

Potential Negative Effects:
1. The children cannot finish their task
2. The children get frustrated so they stop their work and start to talk or disturb the other children

Potential Solution II:
The teachers must be consistent with the rules and setting of time to complete tasks

Potential Positive Effects:
1. The teacher can save the time
2. The teacher can help maintain discipline in the classroom

Potential Negative Effects:
1. The ADD child cannot be calm because he thinks the teachers do that because he makes a mistake in his class.
2. The ADD child will disturb the other children who become good role models.

Potential Solution III:
The teachers invite the ADD children to sit near the teacher’s desk or surround the ADD child with classmates who will serve as good role models.

Potential Positive Effects:
1. The ADD child can concentrate to do his task
2. The ADD child will follow what the good role models are doing

Chosen solution
1. The teachers care about the children by giving positive reinforcement
2. The teachers must be consistent with the rules and setting of time to complete the tasks
